

Assignment

1) create the table as in below with appropriate difference as in below

Basic CSS Font Properties

The following table shows you the basic CSS font properties that allow you to change the appearance of text in your documents.

Property	Purpose
font-family	Specifies the font used.
font-size	Specifies the size of the font used.
font-style	Specifies whether the font should be normal, italic or oblique.
font-weight	Specifies whether the font should be normal, bold, bolder, or lighter

2) create the below HTML page

intention: ability of student to see creative thinking

H1 is inside the Box

When you are styling a web page with CSS you must start to think in terms of **boxes**.

Each element is treated as if it generates a new box. Each box can have new rules associated with it.

Padding is between the content and the border. **Margin** is outside of the border to separate this box from any neighboring boxes.

Paragraph with Id and Shorthand

3 highlighters (!!think)

different borders(dotted and solid)

more importantly-> all these should be <p> tag donot use any other tags
